PROJECTS

Hospital Management System

I designed the Hospital Management System, which is useful for hospitals to book appointments for patients and doctors. The Hospital management system was developed by a group of three, and I contributed to the front end using HTML, CSS, and JavaScript. My teammates developed the other parts, which include the backend and database.

Text Utils

Developed a Text Utils App, a web-based Single-page Application designed with the help of bootstrap CSS properties, and the whole project is coded on React.
